

Passage - 2

In a study, scientists compared the In a same, compared the microbiomes of poorly nourished and well well microbiomes and young children, Gut salared from faccal. nourished in a culidren. Gut microbes were isolated from faecal samples of and healthy skills of the control of the control of the control of the culidren. microbes were and healthy children. The microbiome was "immature" and less diverse in malnourished children compared to the better developed "mature" microbiome found in healthy children of the same age. According to some studies, the chemical composition of mother's milk has shown the presence of a modified sugar (sialylated oligosaccharides). This is not utilized by the baby for its own nutrition. However, the bacteria constituting the infant's microbiome thrive on this sugar which serves as their food. Malnourished mothers have low levels of this sugar in their milk. Consequently, the microbiomes of their infants fail to mature. That in turn, leads to malnourished babies.

- 16. Which one of the following is the most logical, rational and crucial inference that can be derived from the above passage?
 - (a) If malnourished condition in children is caused by gut bacteria, it cannot be treated.
 - The guts of malnourished babies should be inoculated with mature microbiomes.
 - Babies of malnourished mothers should be fed with dairy milk fortified with sialylated oligosaccharides instead of mother's milk.
 - Research on benign effects of gut bacteria on nutrition has policy implications.

- 17. On the basis of the above passage, the following assumptions have been made
 - Processed probiotic foods are a solution to treat the children suffering from malnutrition due to immature gut bacteria composition.
 - 2. The babies of malnourished mothers generally tend to be malnourished.

Which of the above assumptions is/are valid?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

Passage - 3

Temperatures have risen nearly five times as rapidly on the Western Antarctic Peninsula than the global average over the past five decades. Researchers have now found that melting glaciers are causing a loss of species diversity among benthos in the coastal waters off the Antarctic Peninsula, impacting an entire seafloor ecosystem. They believe increased levels of suspended sediment in water to be the cause of the dwindling biodiversity in the coastal region.

- 18. On the basis of the above passage, the following assumptions have been made:
 - Regions of glaciers warm faster than other regions due to global warming.
 - Global warming can lead to seafloor sedimentation in some areas.
 - Melting glaciers can reduce marine biodiversity in some areas.

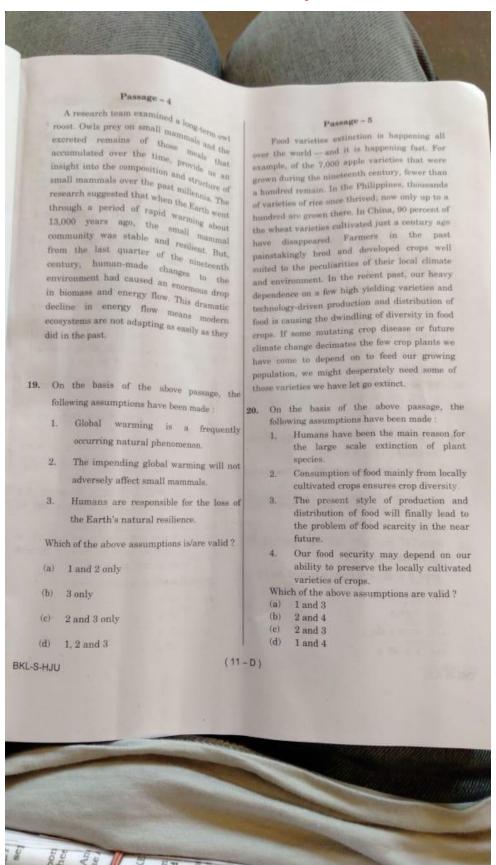

Which of the above assumptions is/are valid?

- (a) 1 and 2 only
- (b) 3 only
- 2 and 3 only
- 1, 2 and 3

Passage - 3

The rural poor across the world, including The rural poor.

India, have contributed little to human-induced in India, have control they are on human-induced climate change, yet they are on the frontline in coping with its effects. Farmers can no longer coping with its
rely on historical averages for rainfall and temperature, and the more frequent and extreme weather events, such as droughts and floods, can spell disaster. And there are new threats, such as sea level rise and the impact of melting glaciers on water supply. How significant are small farms? As many as two billion people worldwide depend on them for their food and livelihood. Small-holder farmers in India produce 41 percent of the country's food grains, and other food items that contribute to local and national food

- 76. What is the most logical and rational corollary to the above passage?
 - Supporting small farmers is an important part of any agenda (a) Supporting regarding environmentally sustainable
 - (b) Poor countries have little role to play in the mitigation of global warming.
 - Due to a large number of farmer households, India will not have food security problem in the foreseeable
 - (d) Only small-holder farmers in India can ensure food security.
- 77. The above passage implies that
 - There is a potential problem of food insecurity in India.
 - India will have to strengthen its disaster management capabilities.

Which of the above assumptions is/are valid?

- (a) 1 only
- (b) 2 only
- Both 1 and 2
- (d) Neither 1 nor 2

Passage - 4

A changing climate, and the eventual efforts of governments (however reluctant) to deal with it, could have a big impact on investors' returns. Companies that produce or use large amounts of fossil fuels will face higher taxes and regulatory burdens. Some energy producers may find it impossible to exploit their known reserves, and be left with "stranded assets" - deposits of oil and coal that have to be left in the ground. Other industries could be affected by the economic damage caused by more extreme weather - storms, floods, heat waves and

- On the basis of the above passage, the following assumptions have been made:
 - Governments and companies need to be adequately prepared to face the climate change.
 - Extreme weather events will reduce the economic growth of governments and companies in future.
 - Ignoring climate change is a huge risk for investors.

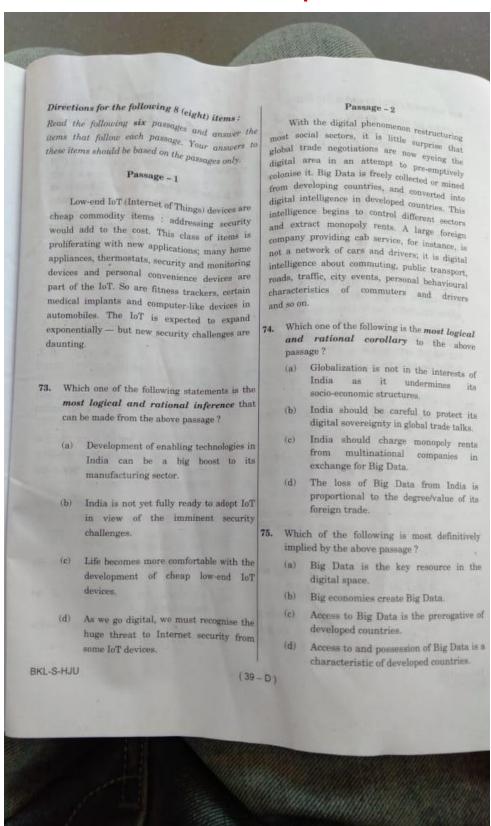

Which of the above assumptions is/are valid?

- (a) 1 and 2 only
- (b) 3 only
- 1 and 3 only
- 1, 2 and 3

Passage - 5

Access to schooling for those coming of school age is close to universal, but access to sharp gradient with socio-economic status. Quotas for the weaker sections in private schools is a provision introduced by the Right of Children to Free and Compulsory Education Act, 2009. The quotas have imposed a debate on issues of social integration and equity in education that private actors had escaped by and large. The idea of egalitarian education system with equality of opportunity as its primary goal appears to be outside the space that private school principals inhabit. Therefore, the imposition of the quotas has led to resistance, sometimes justified.

- 79. With reference to the above passage, the following assumptions have been made:
 - is the fundamental goal of the Indian education system.
 - The present Indian school system is unable to provide egalitarian education.
 - Abolition of private schools and establishment of more government schools is the only way to ensure egalitarian education.

Which of the above assumptions is/are valid?

- 1 and 2 only
- 2 only
- 2 and 3 only
- 3 only

Passage - 6

A majority of the TB infected in India are poor and lack sufficient nutrition, suitable housing and have little understanding of prevention. TB then devastates families, makes the poor poorer, particularly affects women and children, and leads to ostracisation and loss of employment. The truth is that even if TB does not kill them, hunger and poverty will. Another truth is that deep-seated stigma, lack of counselling, expensive treatment and lack of adequate support from providers and family, coupled with torturous side-effects demotivate patients to continue treatment - with disastrous health consequences.

- Making equality of opportunity a reality 80. Which one of the following is the most logical, rational and crucial message conveyed by the above passage?
 - (a) TB is not a curable disease in Indian circumstances
 - Curing TB requires more than diagnosis and medical treatment.
 - Government's surveillance mechanism is deficient; and poor people have no access to treatment.
 - (d) India will be free from diseases like TB only when its poverty alleviation programmes are effectively and successfully implemented.
